

A Roadmap and Tools for Working Together

A roadmap and decision support toolkit can help identify the most cost effective and efficient strategies to guide our path forward.

The Rivanna River Basin Commission is developing the **Rivanna Watershed Action Plan and Toolkit** for use by its member local governments, partners, stakeholders, and citizens to help inform and guide Rivanna protection and restoration. The planning process will build on the information in this Snapshot and provide a road map and tools for guiding our work in the Rivanna Watershed.

Working together, we can restore the Rivanna Watershed to support diverse habitats, provide the ecological services we rely on, and provide waters that are fishable and swimmable for all our citizens.

RRBC thanks our partners for the collaborative support and information essential for completing the 2012 Rivanna Watershed Snapshot.

RRBC Technical Advisory Committee
Collaborative support from Albemarle, Greene, and Fluvanna Counties and the City of Charlottesville
Culpeper Soil and Water Conservation District (www.culpeperswcd.org)
